

111 SUSQUEHANNA AVE.

This building is one of two identical structures in its block and one of Towson's relatively numerous duplexes. These structures are also distinctive for being among the few houses utilizing dark red sandstone in their construction. When combined with clapboards and wooden shingles the end result is a striking appearance that is characterized by its earthiness.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

111 Susquehanna Ave. is a two story duplex with a finished attic and a longitudinal plan. It has a slate gable-end roof with dormers. The building is four bays wide and six bays deep. The first story is of different sized red sandstone blocks laid with an attempt at coursing, with beaded grouting. The upper stories are frame covered with asbestos shingles which replace the original brown wooden shingles.

The west facade, or main facade contains a shed roofed porch, 3/4 of which has been enclosed. The fenestration of this asbestos shingled enclosure is a regular 8/8 sash. The original entrance has been blocked, however an original 1/1 sash window remains. The windows have louvered shutters and architrave-like trim. The gable-end has deep cornices, and deep eaves of tongue-and-groove soffit. This end is vented by two pairs of 1/1 sash windows.

The north facade is dominated by a pair of two large pedimented dormers which repeat the motif of the deeply corniced gables. Casement windows have been inset between these dormers. The regular fenestration on the first level has been interrupted with the addition of an entrance-way above which is a pedimented roof supported by two doric columns. Between each column and wall of the facade exists a wooden bench.

The south facade repeats the appearance of this north facade.

The west end is a collection of geometric shapes. A pair of two story wings project and are nestled beneath the large gable-end of the main block. The continuous cornices, foundation, joists, etc., suggest these wings are original. The interior bays of the first level are enclosed as is the entire second level. An open porch on the south corner and an enclosed porch on the north corner both give access to entrances. The northern porch is enclosed with casement windows and a doorway with a three light transom.

The central bay provides an exterior entrance to a full basement below.

The full basement under each side of the house is constructed of long concrete blocks measuring 2 feet long, 8 inches in height and 7 inches thick. A solid masonry wall bisects the building and each side has an interior access. The circular sawn joists run transversely with a 14 inch spacing.

It is observed that the building is of four different types of masonry - block, poured concrete and rubble walls, brick, and sandstone.

The interior has been altered for commercial purposes. A hall runs along a bisecting wall connecting three rooms and a bathroom per floor on each side.

The upper level contains the most original fabric. Details include three-quarter round corner guards, plain mouldings, bulls eye corner blocks and interior doorways with transoms. Also observed are solid four-panel doors which vary with porcelain knobs and metal box locks or metal plated oval knobs with beads. Additional details include claw-footed tubs, early porcelain fixtures, and cast iron hot water radiators with embossed floral designs.
